

■ A0 Biological
 ■ A1 Low-burden
 ■ A2 Severe/non-bio
 ■ A3 Symptom

grey bars = interaction MDE (smallest detectable moderation).
 Lithium: well-identified bounded null. Antipsychotic: confounded average effect, no reliable moderation. Clozapine: underpowered.

Stratification clears (beyond severity+substance+demographics, $p \leq 0.003$); individual discrimination modest and resistance is AUC-marginal ($p = 0.185$). Monitoring, not prescribing.
